Report Detail

1. For each leg that is affected by shin splints, has there ever been an injury that has resulted in excess pronation of the foot?

“**excess pronation of the foot**” means a positional deformity of the foot such that there is excessive:

- dorsiflexion (the turning of the foot or the toes upward);
- eversion (outward roll of the foot); and
- abduction (outward turn of the foot)

when the foot is in a fixed position or in dynamic motion.

Left leg

- Yes
 No

Right leg

- Yes
 No

2. If you have answered 'yes' for either leg, please give details overleaf of each separate injury including date of injury, diagnosis (if known) or nature of the injury, circumstances of injury and medical attention received:

Details of injuries resulting in excess pronation of the foot:

Left leg			
Date of injury	Diagnosis or nature of injury	Circumstances which led to injury	Nature of medical attention received and name and address of attending doctor

Right leg			
Date of injury	Diagnosis or nature of injury	Circumstances which led to injury	Nature of medical attention received and name and address of attending doctor

Claimant's Signature

You are reminded that:

- The Declaration you signed on the claim form also covers the information you supply on this form.
- There are penalties for knowingly making false or misleading statements.
